Based on data obtained during product development and is subject to change. Data captured using NFRC guidelines and calculated for single pane, 3mm clear glass. Reported values are taken from representative product samples and are subject to normal manufacturing variances. Actual performance will vary based on a number of factors, including glass type and properties. *IRER is a more complete measurement of heat experienced from solar infrared radiation (780-2500nm) including absorbed and re-radiated energy.

**SIRR is a measurement of solar infrared radiation (780-2500nm) not directly transmitted through glass.
